

Ubuntu Analytiq Website Changes

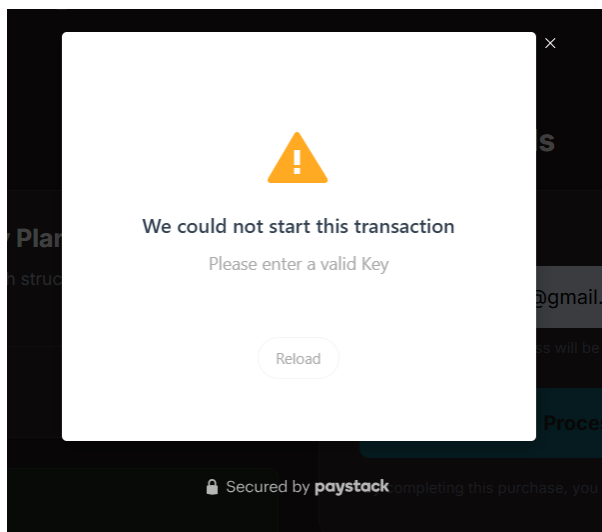

1. Change the questions to the questions in the appendix.
2. I would like to have a landing before the questions as follows
Heading: Discover Your Perfect Path in AI fluency
Sub-heading: Whether you are just starting or ready to build agents, let's find the right roadmap for you.
Body: AI is transforming how we do business in Africa; from drafting emails in Kilimani to automating payments with M-Pesa. But with so many tools and strategies out there, it's hard to know where to focus. We created this assessment to cut through the noise and it is designed to analyze your current skills in real-world scenarios (like Data Protection laws, Prompt Engineering, and Automation). Find out where you stand in just 5 minutes.
[Start My Assessment]
3. The heading at the top of the questions (highlighted in green) should read "Become Fluent in AI"

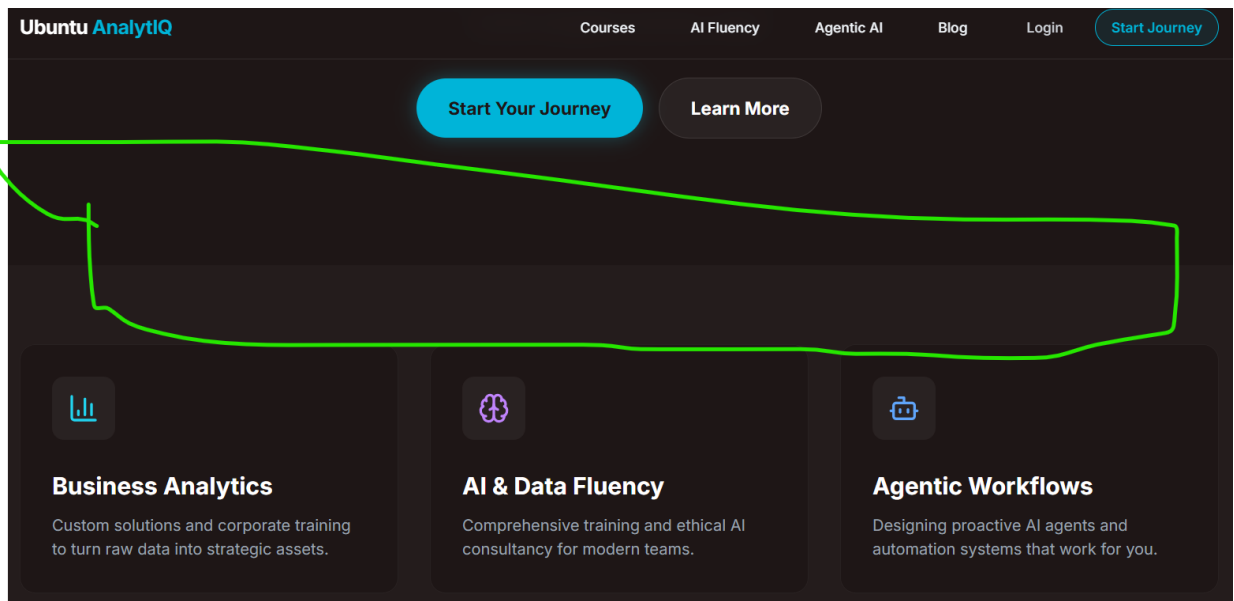

4. In the below snip, I need to include what we'll be offering
 - a. Personalized playbook mastery
 - b. Weekly mentorship check-in sessions
 - c. Access to private whatsapp community of AI enthusiasts

5. I am getting the below error when I press pay;

6. I hope we are logging in the emails
7. AI mastery is costing 5,000 while AI agents is costing 7,500, Please change this under AI fluency.
8. For the blog, please refer to this last file, I am attaching it here.
9. I want the highlighted to say “Our Approach”

10. Under courses do the below
 - a. Change Excel workshop to cost; 20,000 (include its three months)
 - b. Change Excel & Power BI Hybrid to cost 25,000 (include its three months)
 - c. AI Agents MasterClass to cost 12,500 (include its one month)
 - d. AI Mastery to cost 7,500 (Include its one month)
11. Under “Agentic AI”, lets make the “Book a Strategy Consultation” stay on Ubuntu Analytiq like the way booking calls is staying in the page
12. Then also align the Chatbot.

“Appendix”

The questions:

Here are the 20 tailored questions based on industry research for the African market (Kenya specifically) and global best practices.

These questions are designed to funnel users:

- **Score < 70%: Funnel to "AI Mastery Plan" (Focus: Fundamentals, Prompting, Ethics).**
- **Score ≥ 70%: Funnel to "AI Agents Mastery Plan" (Focus: n8n Automation, APIs, Agentic Workflows).**

Part 1: AI Mastery (Intermediate)

Focus: Prompt Engineering, AI Tools, Ethics (ODPC), and Practical SME Use Cases.

1. You are a Kenyan SME owner wanting to draft a localized marketing email for a Nairobi audience. Which prompting technique would yield the most culturally relevant result?

- A) "Act as a Kenyan digital marketer. Write an email for [Product] using local slang (Sheng) and professional English, targeting youth in Kilimani." (Correct)
- B) "Write a marketing email for [Product]."
- C) "Summarize this product description into an email."
- D) "Write a sales pitch in the style of Shakespeare."

2. Which AI tool is best suited for "Real-Time" market research (e.g., finding current maize prices in Nakuru or competitor pricing)?

- A) Perplexity AI / Google Gemini (Tools with Web Search) (Correct)
- B) ChatGPT (Free Version 3.5)
- C) Midjourney
- D) Jasper AI

3. Under Kenya's Data Protection Act (2019), what is a major risk when pasting customer phone numbers and credit limits into a public LLM like ChatGPT?

- A) Data Leakage & Violation of Privacy (The model might train on this confidential data). (Correct)
- B) The model will refuse to process numbers.
- C) It costs too much money.
- D) The internet connection will fail.

4. You want to automate customer support for your business on a platform most Africans use daily. Which tool integration is most valuable?

- A) WhatsApp Business API + AI Chatbot (Correct)
- B) Slack Bot
- C) Discord Server
- D) Email Autoresponder

5. What is "Chain of Thought" prompting?

- A) Asking the AI to "Think step-by-step" to improve reasoning on complex math or logic problems. (Correct)
- B) Asking the AI to link multiple websites together.
- C) Writing a very long prompt with no punctuation.
- D) Translating text from English to Swahili.

6. Your AI just invented a fact about a Kenyan historical figure that isn't true. What is this phenomenon called?

- A) Hallucination (Correct)
- B) Temperature Spiking
- C) Overfitting
- D) RAG

7. Which of these is a "Generative AI" task?

- A) Creating a new logo or writing a blog post from scratch. (Correct)
- B) Sorting an Excel sheet alphabetically.
- C) Calculating the sum of a sales column.
- D) Storing files in the cloud.

8. Why is "Context Window" important when analyzing a long PDF report (e.g., a 50-page annual report)?

- A) It limits how much text the AI can "read" and remember at one time. (Correct)
- B) It determines the speed of the internet.
- C) It changes the color of the interface.
- D) It is the price per month of the tool.

9. For a graphic designer in Nairobi, which tool is specifically built for generating high-quality images from text?

- A) Midjourney / DALL-E 3 (Correct)
- B) Claude 3.5 Sonnet
- C) GitHub Copilot
- D) Zapier

10. What is the most effective way to protect your job as a content writer in the age of AI?

- A) Becoming an "AI Editor" who adds human insight, local context, and strategy to AI drafts. (Correct)
- B) Refusing to use AI tools.
- C) Typing faster than the AI.
- D) Switching to manual typewriter.

Part 2: AI Agents Mastery (Advanced)

Focus: Automation (n8n), API Integration (M-Pesa), Agentic Frameworks, and Complex Workflows.

11. What is the primary difference between a "Workflow Automation" (like Zapier) and a true "AI Agent"?

- A) Automation follows a rigid "If This, Then That" path; an Agent can "Reason" and decide which tools to use dynamically. (Correct)
- B) Automation is cheaper.
- C) Agents only work on mobile phones.
- D) Automation requires code; Agents do not.

12. You are building an agent to process payments. Which "Tool" would you give the agent to trigger an M-Pesa transaction?

- A) An API Function Call (POST request) to the Daraja API. (Correct)
- B) A link to the Safaricom website.
- C) A text file with phone numbers.
- D) A screenshot of a QR code.

13. In the context of n8n (a low-code automation tool), what does a "Webhook" allow you to do?

- A) Receive real-time data from an external source (e.g., a Typeform submission) to trigger a workflow. (Correct)
- B) Catch fish in a digital pond.
- C) Design a website landing page.
- D) Encrypt your password.

14. What does RAG (Retrieval-Augmented Generation) allow an AI agent to do for a Kenyan Law Firm?

- A) Search a private database of Kenyan Legal Precedents before answering a client's question. (Correct)
- B) Generate random laws.
- C) Search Google for US laws only.
- D) Automatically sue people.

15. You are designing a "Customer Support Agent." What is the risk of an "Infinite Loop"?

- A) The agent keeps trying to solve a problem without success, burning through your API credits and money. (Correct)
- B) The agent becomes sentient.
- C) The customer gets too many free products.
- D) The internet connection becomes too fast.

16. What is the role of a "Router" in a Multi-Agent System?

- A) It acts as a traffic controller, deciding whether to send a user's query to the "Sales Agent" or the "Tech Support Agent." (Correct)

- B) It provides Wi-Fi to the office.
- C) It translates English to Swahili.
- D) It generates images for the chat.

17. Which format is commonly used to structure data when passing it between an AI Agent and an API (like M-Pesa or Shopify)?

- A) JSON (JavaScript Object Notation) (Correct)
- B) PDF
- C) MS Word Doc
- D) JPEG Image

18. Why is "Human-in-the-Loop" critical when using agents for high-stakes tasks (like approving loans)?

- A) To prevent the AI from making biased or costly errors by requiring human approval before the final action. (Correct)
- B) Because AI cannot do math.
- C) To slow down the process intentionally.
- D) To ensure the AI doesn't get lonely.

19. You are using LangChain to build an agent. What is "Memory"?

- A) The mechanism that allows the agent to remember previous messages in the conversation to maintain context. (Correct)
- B) The hard drive space on your laptop.
- C) The training data from 2021.
- D) The speed of the processor.

20. A "ReAct" Agent follows which cycle to solve problems?

- A) Reason → Act → Observe (It thinks, uses a tool, looks at the result, and thinks again). (Correct)
- B) Read → React → Repeat.
- C) Random → Action → Output.
- D) Request → API → JSON.

If Score < 70% → AI Mastery

Your Recommended Path: AI Mastery – Chatting with AI

This path will:

- Strengthen your foundations
- Clear understandings of AI tools – real-world use cases
- Help you communicate effectively with AI
- Prepare you for AI Automations

Most high-performing students start here.

What Your Enrollment Includes

- ✓ Structured Playbook
- ✓ Weekly Live Group Mentorship
- ✓ Weekly Practical Tasks & Homework
- ✓ Private WhatsApp Community

This path is focused on; Foundations, Prompt Engineering, Ethics and Real-world use cases. The program saves you months of trial and error and prepares you for advanced AI systems.

If Score $\geq$ 70% $\rightarrow$ AI Agents Mastery

Your Recommended Path: AI Agents Mastery – Delegating to AI

This path is designed for people who:

- *Already understand AI fundamentals*
- *Want to automate workflows*
- *Are ready to manage AI systems*

You've demonstrated readiness for this level.

What Your Enrollment Includes

- ✓ Structured Playbook
- ✓ Weekly Live Group Mentorship
- ✓ Weekly Practical Tasks & Homework
- ✓ Private WhatsApp Community

This path focuses on; Agent design, Automations tools (n8n, make, python), API integrations, Workflows

This program is for builders ready to save hours every week through delegation and automation.
